COMMON RETINAL DISEASES YOU NEED TO KNOW

Joint Continuing Professional Education Programme with SOA and SNEC for Optometrists and Opticians

Course Outline

This course will cover clinically relevant retinal conditions commonly encountered in an outpatient setting.

It is important to pick up and correctly recognise early signs and symptoms of retinal disease. Early detection of a disease increases the chances that a patient will retain useful vision.

Course participants will be taught how to recognise various retinal disorders requiring further investigation and referral while being able to confidently reassure patients who have no evidence of risk. This course will equip optometrists and opticians with background knowledge of retinal diseases which they can share with their clients.

Course Director

Dr Ian YEO

Course Co-ordinator

Ms SIOW Kalin

Course Faculty

Dr CHAN Choi Mun

Dr Gemmy CHEUNG
